

Walk to School Week 23-27th October 2023

Trees are our friends they help to give us cleaner air.

They suck in many things that pollute the air including Carbon Dioxide which comes from vehicles when they are driven. The trees convert this into Oxygen, which is what we breathe in, and we need to keep us alive.

A mature tree can take in about 21Kg of Carbon dioxide a year.

Every mile which is walked instead of driven saves 0.6kg of Carbon dioxide going into the air.

So, for every 35 miles we walk instead of being driven, we save 1 tree needing to clean up the Carbon dioxide pollution from those journeys.

Let's see how many trees we can do the work for across York in Walk to School Week...every journey walked by each pupil will be calculated as 1 mile
